EN OEUVRE LE PROCEDE ET EQUIPEMENTS ASSOCIES

WO 2005/081556 A1

(57) Abstract: The invention relates to terminals which can communicate through a second sub-system (3G), but not a first sub-system (2,5G) of a telecommunication system, using first and second modes of communication simultaneously. For such a terminal (1) with a current communication with the first sub-system using the first communication mode, a request for establishment of a second communication using the second communication mode for said terminal is made, said request being made by said terminal to the first sub-system, in reply to the detection of said request, a transfer of the first current communication to the second sub-system is initiated and a second communication established with the second mode of communication.
